Product Description

A312 Smls Stainless Steel Pipe (304H Tp304H 304 316 310 347 2205)

The yield strength of 2205 duplex stainless steel is more than double that of ordinary austenitic stainless steel. This characteristic allows designers to reduce weight when designing products, giving this alloy a price advantage over 316,317L. This alloy is particularly suitable for the temperature range of -50°F/+600°F.

For applications beyond this temperature range, this alloy may also be considered, but there are some limitations, especially when applied to welded structures

Pressure vessels, high pressure storage tanks, high pressure pipelines, heat exchangers (chemical processing industry).
